Clubhouse Lower-level project.

The areas outlined in green are the ones that will have 4 inches of cement put on them. The top area is the east side facing the golf course. The lower area is the narrow one on the west side. The sketch at the top depicts the windows that will be installed and the new door on the right (north) side. In addition to the concrete work some generic underground plumbing drain lines will be installed

The windows and door have an 8 –10-week lead time. Therefore, the project won't start until early September. We don't want openings covered with plywood during hurricane season. The project is expected to be completed in mid-October.
